ABOUT US ▼

The first notion of the Paya industrial group had been started in 1991 by the establishment of PAYASYSTEM Co. By approaching the 3rd millennium, and considering the development of informatics and network industries in the world from one part, and the increasing necessity of the network equipment in the country from the other part, and by taking 10 years of successful experience into account, Paya Co. decided to expand its presence in the industry and work its way in the road of service and self-sufficiency. The efforts resulted in production and distribution of racks & accessories under the brand name of Paya System. The conceptual point of view of the company extra has been rewarded with various successes:

First & only exporter of racks to England, Europe, Africa & Middle East

The products of this company are manufactured and exported for the SY Electronics Co. in England in OEM (Original Equipment Manufacturer) fashion Nowadays the US HP Rack production lines have been developed and expanded and have been manufacturing the similar products with competitively lower prices.

With regard to the need of the IT industry to products with different facilities and with the purpose of avoiding the outflow of foreign currencies in the middle of economic sanctions, the company had started its new production line in 2011.

With a quarter of century of successful experience at its back and by using the most advanced and updated machineries, as well as skillful experts, the company has achieved the manufacturing of the products with qualities superior to those made overseas, under the brand name of HPA (HP ASIA).

Paya Industrial group is active in different fields including:

Rack & Accessories (PAYA System & HP Asia)

Store's Decorations (PAYA Tarho Form)

Modern Storage Systems (Jakoob)

Creativity Boutique (Mergen Studio)

Stores' Furniture & Shelves (Paidar)

The company has 10000 Sq.m of site plant, advanced production line by the Japanese brand "AMADA", Italian electrostatic powder coat finish line, and uses the updated engineering knowledge by more than 400 designers, experts and employees in different units.
